

**Justin F. Smith, PE** is a Senior Civil Engineer in the Division of Dam Safety and Inspections at the Federal Energy Regulatory Commission in Washington, DC. Justin is an agency subject matter expert in the fields of seismicity and geotechnical engineering. Justin's primary responsibilities include the seismic hazard analysis of hydropower projects including dams, powerhouses, and appurtenant features. Additionally, Justin assess the dynamic performance of earth embankment and rockfill dams and their foundations for liquefaction susceptibility, deformation, and post-earthquake stability.
